### **Khadim: Putting India's foot forward.**

In his opening address at the May 2022 company meeting held at the Kolkata headquarters in DLF IT Park, Mr. Siddhartha Roy Burman, Chairman & Managing Director of Khadim India Limited, expressed appreciation and commendation for the CEO and team members for their remarkable turnaround, reporting a PAT of ₹ 64.59 million compared to a loss of ₹ 329.15 million. He emphasized how the new logo had undeniably given the company a fresh retail identity.

To become the largest and most affordable fashion footwear provider in India, the company pursued a brand strategy, that revitalized the products and targeted young customers. Mr. Burman described India's demographic landscape, highlighting urban residents in metros and Tier I and Tier II cities with higher income and exposed to contemporary high-street fashion, referring to them as "INDIA." In contrast, he identified another segment residing in Tier III areas, which were becoming fashion-conscious through education, television, and digital media, labeling them as "BHARAT."

Khadim India offers a premium yet affordable range of products across its retail stores in metros, featuring top retail sub-brands such as British Walker, Lazard, Cleo, Pro, among others. Simultaneously, it addressed the demand from Bharat by leveraging its distribution network and offered products under sub-brands like Wash N Wear, Kalypso, Fitnxt, which provided a blend of fashion, durable, and extremely pocket-friendly footwear options. Mr. Burman also acknowledged the rising popularity of the athleisure category, noting consumers' increasing preference for comfortable, casual, and trendy sports shoes.

### **Indian Footwear Industry**

India, the second-largest producer of footwear, exceeded an annual production of 222 crore pairs in 2022, representing 13 percent of the global footwear output, following China's dominance (approximately 67 percent), and likely ranking as the third-largest consumer market. The Indian market exhibited a notable demand for branded, premium, and comfortable footwear, and has emerged as an attractive market for fashion retailers. The reasons for the elevated fashion-consciousness are the significant young consumer base, increased income, improved living standards, and the increased presence of women in the workforce. The desire for fashionable, stylish, and comfortable footwear saw a gradual upsurge, coinciding with a growing inclination towards owning footwear suitable for various occasions. Projections indicated that the sector would witness a Compound Annual Growth Rate (CAGR) of 16 to 17 percent by 2025, with domestic consumption accounting for approximately 90 percent of India's footwear manufacturing capacity. Organized footwear retail was poised to experience growth exceeding 20 percent. The demand for sports and athleisure footwear exhibited stable growth and was anticipated to maintain a growth rate exceeding 24 percent in the foreseeable future, doubling in size by 2025. Additionally, there was a noticeable shift towards non-leather footwear within the country. On a global scale, the non-leather footwear market had nearly reached 86 percent saturation.

India's footwear industry was highly unorganized, with nearly 15,000 micro and small industries, as reported by the Council for Footwear, Leather & Accessories (CFLA). In

2022, 33% of the market was organized, with expectations to reach 40% within the next 2 to 3 years. Piyush Goyal, the Union Minister of Commerce, emphasized the advantage of India's vast domestic market and increasing purchasing power during his address at the India International Footwear Fair in July 2023. Experts foresaw per capita consumption rising to 2 - 2.1 pairs by 2025 from the current 1.9 pairs per capita, which remained below the global average of 3 pairs. India had the potential to become a powerhouse in footwear production. Initiatives such as the new leather policy and Free Trade Agreements with the UAE and Australia, along with other forms of support extended by the ministry, aimed to empower local producers to adopt global standards of quality and sustainability. These efforts were expected to enhance visibility in the international marketplace.

The Indian economy showed signs of recovering demand post-COVID, except for the retail sales of essential commodities, which were negatively affected. The footwear retail market also experienced significant double-digit degrowth during 2021, to an extent of 25 to 30 percent. Market leaders such as Adidas, Khadim, Bata, Metro Shoes, Liberty, etc., reported losses. However, Relaxo and Campus sustained their performance, with a marginal decline of approximately 2-3%.

Source: Motilal Oswal (2022)

In 2023, retail penetration exceeded 10% and was anticipated to continue increasing in the subsequent years. The proliferation of smartphones, even in rural India, along with the adoption of digital payments and heightened awareness about online markets and better deals, bolstered retailers' online sales. The government's prioritization of measures to develop digital infrastructure in Tier III, suburban, and rural areas significantly contributed to improvement. Consequently, India moved towards becoming the fifth-largest preferred retail destination globally.

### **Emergence of Indian footwear Brands**

In the mid-1980s, the organized retail of Indian shoe brands began to evolve. Regional players like VKC, one of the largest home-grown manufacturers of sandals, positioned themselves as providers of long-lasting and affordably priced products, which gained tremendous popularity and established a leadership position in the southern part of India. The company heavily invested in high-profile brand ambassadors like superstar Amitabh Bachchan for their campaign "I am proud of hard work." From fiscal year 2017, the company experienced steady revenue growth, increasing from Rs. 1150.8 Crores to over 2100 Crores in less than 5 years. VKC dominated the market in Kerala, Tamil Nadu,

Karnataka, Andhra Pradesh, and Telangana, claiming a 65% market share, with the remaining 15% from the west, 12% from the east, and North India contributing 8% of the company's revenue. However, the company recently ventured into apparel. The financial figures of various key players are provided in the table below.

**Table – I: Key Players: Revenue from Operations**

| year           | 2023   | 2022     | 2021   | 2020   | 2019     | 2018   | 2017   |

Paragon footwear, also hailing from Kerala and boasting a strong presence in the southern region, expanded rapidly in the value-for-money segment. The company aggressively focused on expanding into all regions of India, particularly targeting tier III and IV cities and rural areas. Over the past few years, the company reported growth of 25 to 30 percent, despite setbacks during the COVID lockdown period. With its economy pricing, quality products, excellent marketing campaigns, and robust distribution network and online presence, Paragon became a preferred choice in the mass market across India.

Liberty Shoes established a stable presence in over 25 countries. With over 400 exclusive showrooms across India, Liberty aggressively pursued expansion. The company had 10 sub-brands catering to all segments, focusing solely on footwear production. Indian brand, Mirza International had over 1,000 multi-brand outlets in the UK, 5 exclusive showrooms in Dubai, and outlets in other countries, selling premium brands like Thomas Crick, Off the Hook, and REDTAPE. Its presence in the premium segment in India was notable, with close to 30 percent of revenue coming from international sales. Another brand, Metro sold quality and innovative footwear through their 200-plus retail stores, including over 100 in tier I cities and metros. They operated under the "company-owned, company-operated" (COCO) model, running Multi-Brand Outlets (MBOs) and Exclusive Brand Outlets (EBOs) for Metro, Mochi, and Walkway brands, as well as Crocs™ branded EBOs. They provided an omni-channel experience to customers through their websites, various online marketplaces, and social media platforms.

Sreeleathers had established a successful presence in West Bengal and Odisha, offering durable and affordable footwear. They operated over 40 exclusive stores and conducted sales online. Lakhani Footwear produced sports shoes, beach slippers, PU injected sports shoes, and PVC injected sports shoes. The company provided trendy and stylish shoes through its network of over 350 distributors across all states of India. The company deliberately refrained from online or retail sales.

Bata, the market leader in the Indian footwear industry, was severely affected by the COVID-19 pandemic and economic contraction. Its revenue from operations dropped by 40 percent in 2020-21 compared to the previous fiscal year. After experiencing a decline, Bata revitalized its customer perception to drive growth. The company has launched a sneaker studio and introduced women-oriented products. Bata sold its shoes through 2,050 exclusive retail outlets, most of which were company-owned, and maintained a vast distribution network across India. With excellent marketing campaigns, repositioning of over 300 sneaker styles across 9 brands, rapid rollout of more than 530 franchise stores, 24/7 casual collections, a 360-degree campaign, digital multi-channel business, and a robust corporate network of over 550 enterprises through its B2B division, Bata reclaimed a better financial and market position than before.

Relaxo aggressively positioned its brands to capture the mass market starting in 1980 when it was one of the few brands offering stylish casual footwear in the branded shoe retail market. With a vast production capacity of 7.25 lakh pairs per day and an economy pricing range, Relaxo successfully established its presence in the Indian mass market. The company built a vast distribution network comprising 700 distributors and 390 company-owned retail outlets, focusing on the mass (< Rs.500) and economy (Rs 500 – Rs 1000) segments, which accounted for close to 80 percent of the shoe market. Relaxo did not manufacture or sell accessories like belts, wallets, or bags. It sold its products through distributors in rural, semi-urban, and Tier III cities, posing significant competition to regional and mass players. Additionally, it maintained a presence on almost all major e-commerce platforms and sold through its website. Bollywood actors Salman Khan and Akshay Kumar were selected as brand ambassadors. As a Fortune 500 (India) company, Relaxo became synonymous with quality products and affordable prices. Despite the challenges posed by the COVID-19 pandemic, Relaxo footwear continued to sell well, resulting in excellent operating performance and steady growth.

After the liberalization during the mid-1990s, international brands such as Adidas, Nike, Reebok, etc., entered the Indian market by establishing a network of Exclusive Brand Outlets (EBOs). The products primarily focused on sports and athleisure. These companies implemented a skimming pricing strategy, creating a new branded premium sports and athleisure segment in India.

Campus, started in 2006 using skimming pricing strategy focussed on sports and athleisure segment in India. It developed a wide portfolio comparable to Adidas and emerged as a market leader in the sports and athleisure segment, selling more than 15 million pairs annually in the economy and mid-premium segments. Campus had over 75% of its Stock Keeping Units (SKUs) priced below INR 1,500 and nearly 55% below INR 1,000, a proportion similar to other domestic peers but on a much larger scale. The company sold

its products through 15,000 geo-tagged multi-brand retail stores, over 35 company-owned exclusive outlets, large format stores such as Walmart, Vishal Retail, and Reliance Smart, as well as all the leading e-commerce portals, establishing a strong omnichannel presence. However, recognizing customer aspirations in the premium segments and leveraging its in-house capabilities, the company endeavoured to premiumize its product profile, aiming to cater to a wider target base.

### **Competitive Landscape**

For generations, Indian artisans have produced ethnic footwear. Rajasthani Mojari and Kolhapuri or Jooti remained popular ethnic wear among modern youth and were commonly used for various occasions. However, the industry became incompetent, lacking innovative designs and improved quality standards, and faced tough competition from both cheap footwear by unorganized and branded organized players. In 2020, the government allowed 100 percent foreign direct investment in this industry, making it even more competitive and difficult for ethnic footwear producers to survive.

India witnessed a growing interest in specialized footwear for sports, athleisure, fashion, fitness, adventure, and trekking, among other purposes. Rapid urbanization and the emergence of shopping malls played pivotal roles in transforming footwear from a utility product to a fashion item. Consumers increasingly embraced branded products, prompting shoe manufacturers to align their strategies with consumer trends and effectively position themselves in the evolving Indian market. A clear segmentation of the market based on price became prominent.

**Exhibit – 1: Footwear market segment in India**

Source: <https://www.indianretailer.com/article/retail-people/trends/how-bright-is-the-future-of-india-s-footwear-industry.a7994>

Footwear companies have expanded and added products like belts, wallets, bags, foot care to cater to the broad consumer needs of leather products and increase revenue from their retail stores. (Exhibit- II).

## **Khadim India**

Khadim India commenced its retail business with COOs for footwear products in 1993. Six years later, Khadim opened two retail outlets in Chennai, one in Secunderabad, and one in Bengaluru. Khadim India Ltd was a home-grown manufacturer and retailer. It had defined its core business objective as 'Fashion for Everyone'. The company sold trendy products ranging in price from ₹ 75 to ₹ 1,299. The product range consisted of EVA, basic and premium Hawaii, PVC, PVC DIP, PU, Stuck On products, sports shoes, etc.

It had a mix of company-owned and franchise stores. It boasted the largest presence in East India and claimed to have a 5% market share in the organized footwear market. The company strongly believed in an asset-lite model of doing business, with nearly 74% of retail conducted through the franchise route and approximately 84% of product requirements outsourced. After 2015, the company experienced steady revenue growth until the COVID breakout in 2020. However, Khadim aimed for a quick turnaround as the market gained momentum.

Mr. Burman understood the industry statistics well. Khadim was well positioned, which was reflected in its dominant sales routes. Between 58% and 60% of Khadim's retail sales came from Tier II to Tier III markets, where 75% to 80% of SKUs were priced below ₹1,000. Additionally, around 80% of its distribution sales came from Tier II to Tier III markets, where 85% of the SKUs were priced below ₹500.

At the same time, Khadim also invested in the premiumization of their shoes and aimed to stay competitive with the changing needs of customers. The average price of a pair of shoes had increased to Rs. 600 from Rs. 495 before the COVID period. Khadim demonstrated financial recovery in 2022; however, the sales volume growth in different segments and channels required further introspection.

Special focus was given to restoring the sports range to cater to the growing demand in the athleisure category. Khadim's strategy for retail stores emphasized improving the look and feel of the accessories segment, especially for ladies' bags and backpacks. Recently, it had tied up with VIP and Wildcraft for backpacks and school bags, as well as with "Helios" for shoe accessory products such as shoe polishes, shoe shiners, shoe shampoo, wax polish, sports shoe cleaner, brushes, etc., and "Jockey" to sell their socks in Khadim's stores.

## **Conclusion**

The Indian footwear industry underwent a radical shift. The athleisure and sports-inspired footwear trend, where athletic-style clothing and footwear were worn for everyday activities, gained popularity, and sports-inspired footwear, especially sneakers, became a fashion statement. The rise of various Indian brands positioning themselves in the economy segment and catering to the mass market slowly eroded the market share of established players like Khadim, who had traditionally been popular among consumers in the economy segment. Mr. Siddhartha Roy Burman diversified into various other segments in collaboration with established brands and invested heavily in the premiumization of its product range. However, it did not prove worthwhile in bringing the sales volume back on track.

**Annexure – I: List of major footwear companies in India**

| Name         | Extd. | Origin    | Capacity       | states       | Cities | distributor | Show room s |

## Appendices – I: Khadim's Business Strategy

### Our Vision

To be one of the largest and successful affordable fashion footwear brand in India for the entire family for every occasion

### Our Mission

Ensuring customer delight and stakeholders return by delivering quality products at an affordable price.

### Business Model

Our 2-pronged revenue-diversified business strategy is modeled around the verticals of:

Growth in each of these segments is powered by its own customer base, exceptional product ranges and multi sales channels.

In the Distribution business, our model is a mix of in-house and contract manufacturing.
